Setting up OpenVPN on a Mac

Download TunnelBlick

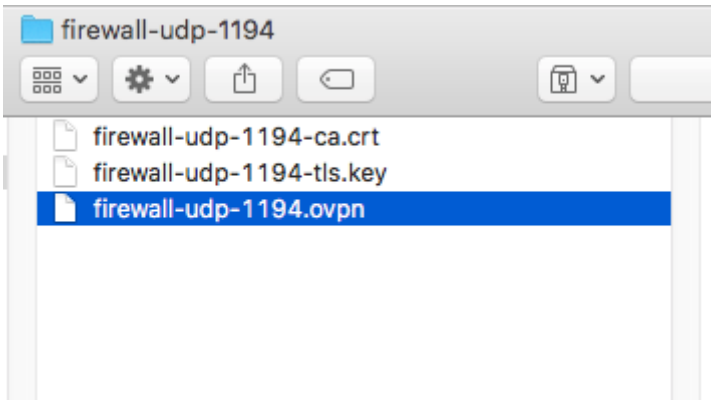

https://tunnelblick.net/release/Tunnelblick_3.8.4b_build_5602.dmg

Right click (or CTRL + Click) the icon and press Open

Once installed you can open it from the top icon

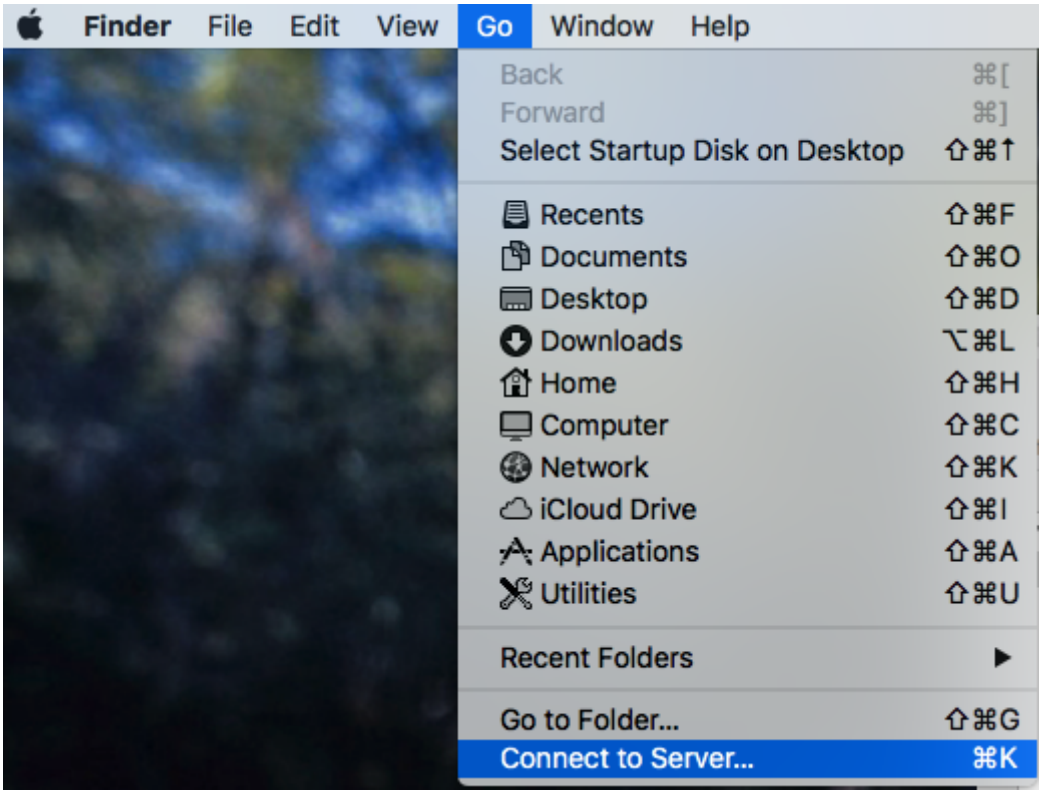

Click VPN Details. You can drag the OVPN file from the Config Files into TunnelBlick (should be sent directly to you)

When you connect, you will need to enter the username and password supplied.

Once connected, go to Finder and Connect to Server

And enter the details to connect to your Server

You may be asked your network credentials, this is separate from the the VPN credentials and will most often be the same as you log on with on the network or your machine if supplied by the company.
